

# AZHARUL RAJ

Software Engineer

## Study Plan

Since childhood, I've had a dream of becoming a great software engineer after completing my graduation. Currently, I'm studying C++, and I enjoy every moment of programming. I also work with JavaScript and other languages, but my real passion lies in big data and machine learning. I plan to pursue advanced studies in these fields, focusing on mastering data analytics and AI. In the future, I might even pursue a PhD in big data to dive deeper into research and innovation.

## EDUCATIONAL EXPERIENCE

### Diploma In Engineering Rangpur - Bangladesh

I studied for a diploma in engineering after Elementary School. I had a different major back then but still, I love those days. I really had a good career over there.

### Bachelor in Software Engineering Jiangsu Normal University Xuzhou, Jiangsu, China

I started the university in September 2024. I learned a lot of new technology related to computer software. Some programming related languages too.

## PROGRAMING LANGUAGE

- JavaScript
- C
- C++
- Python

## VISITED COUNTRY

### India

I visited India quite a long ago. It's close to our country and it has same kinds of culture like us. I

### China

Actually I'm here in china for study but it has a lot of traveling places with a lot of beautiness. I visited some of the area but i'll explore more.

## CHILDHOOD STORY

When I was in kindergarten, I remember getting good academic scores. My teachers would often praise me, and it made me feel proud. I enjoyed learning new things and solving simple puzzles. In high school, I continued to do well academically. Scoring high in exams became a goal I set for myself.

In elementary school, I discovered my love for badminton. I became pretty good at it and enjoyed every game with my friends. We formed a close group, always planning fun activities outside school. We often visited parks, fairs, and new places together. Those times were full of laughter, snacks, and exciting moments, creating memories I still cherish.
